

Lospa

Modular Knee System

The background is a vibrant green with a complex, layered design. It features several large, overlapping circles in different shades of green. Scattered throughout the composition are numerous small, realistic water droplets of varying sizes, giving the impression of a wet surface or a microscopic view. The overall effect is organic and dynamic.

Compatibility

Modular Femoral Component - Primary Tibial PS Insert
Primary Tibial PS/CR Insert - Modular Tibial Baseplate

Femoral Component

Stem housing angle: 6°
: The modular femoral component has a stem housing that is tilted 6° laterally.

Stem housing position :
35% from anterior

Tibial Component

Concaved post design
: The posterior part of the post is concavely curved. After cam-post engagement at 75 degrees of flexion, the cam travels down the post. This reduces the risk of the dislocation and allows for deep flexion with joint stability.

Heightened post
: For better stability during the entire knee motion, the post height is designed higher than the Lospa Primary Knee System.
